The energy crisis is making the roll-out of renewables more urgent than ever. To complement these efforts, REDI4Heat will host capacity-building events in five target Member States and develop a Knowledge Sharing Platform and toolboxes for target Member States and local authorities in this crucial process.

REDI4Heat aims to foster the implementation of RED provisions on heating and cooling, while assisting Member States and local authorities in this crucial process. One of the ways is through Solar District Heating.

During the coming months, the first activities of creating awareness, informing, discussing and inspiring people to motivate them to identify challenges and create innovative solutions. To achieve these aims, the consortium and one of the ways is through Solar District Heating.

The event bring together panellists covering the different perspectives needed for development, and policy.

The Consortium has met online on the 3rd and 4th of April 2023 for its 2nd Plenary meeting and presented the main project management issues about REDI4Heat project implementation, with the aim of effectively achieving the expected results.

During this occasion the partners had the opportunity to exchanges updates on the various ongoing activities, define and agree on the next steps of the project.

The webinar took place on 24th February 2023 and hosted Emil Martini, Policy Project Coordinator.

The Rise of Solar District Heating

Speaking of climate change and energy prices, Heat Changers give you options to answer questions and provide insights on environmental technologies and their role in supporting the transition to a low-carbon energy system.

During this webinar, one of the speaker is Alexandra Sutu, from Solar Heat Europe.

The webinar will take place on Monday, 17th May 2023, 10:00 AM - 12:00 PM (CEST)
