

## D4.2 - Policy Adoption Measures for the Decarbonization of the H&C Sector

### FACTSHEET #1\_[Croatia]

#### 1. Identification of the measure

##### *Promotion of RES in DHC*

<b>Strategic Policy Priority (SPP)</b>	<b>SPP #1: Define a policy package per sector</b>
<b>Sector</b>	<b>District heating and cooling</b>
<b>Type</b>	<b>Policy (including regulatory and fiscal)</b>

#### 2. Identification of KPIs (minimum of 3 KPIs)

##### *KPIs*

<b>KPI #1</b>	Number of organised public tenders for RES (and WH) integration in DH systems
<b>KPI #2</b>	Number of RES (and WH) investments triggered
<b>KPI #3</b>	RES (and WH) capacities installed

#### 3. Definition of the operationalization activities (minimum of 3 activities)

##### *OPERATIONALIZATION ACTIVITIES*

<b>#1</b>	<i>Cost Benefit Analysis of RES integration in Croatian district heating systems</i>
<b>#2</b>	<i>Define needed investments and prioritise RES (and WH) technologies</i>
<b>#3</b>	<i>Organize public tender for RES (and WH) integration on Croatian district heating systems</i>

#### 4. Applicability/focus of the measure<sup>1</sup>:

<input type="checkbox"/>	City	
<input type="checkbox"/>	Region	
<input checked="" type="checkbox"/>	National	Croatia

<sup>1</sup> Each MS is expected to focus on the application to, at least, 3 cities and 1 region.

## 5. Overview of the expected results

<b>RESULTS</b>		
<b>KPI ID</b>	<b>Assumptions</b>	<b>Estimated results</b>
<b>#1</b>	<i>Sufficient political will and institutional capacity exist to launch and manage public tenders. There is strong engagement from the private sector and local authorities.</i>	<i>5 public tenders will be organised over the next 5 years for RES and WH integration in DH systems.</i>
<b>#2</b>	<i>A supportive regulatory and financial environment encourages private and public sector investment. Positive outcomes from the Cost-Benefit Analysis support decision-making.</i>	<i>€100 million in RES and WH investments triggered over 5 years.</i>
<b>#3</b>	<i>Projects initiated through public tenders proceed to implementation without major delays. Supply chains and local capacities support timely deployment.</i>	<i>200 MW of new RES and WH capacity installed in DH systems by 2030.</i>

### 1. Brief description of the discussion oriented towards a SWOT analysis

#### Strengths

- There is access to EU funding mechanisms and green financing instruments that can be leveraged for district heating modernization;
- Skills in renewable energy integration is growing, supported by various pilot projects and sector-specific expertise.

#### Weaknesses

- The district heating infrastructure in many parts of the country is outdated, posing challenges for the integration of modern RES and WH technologies;
- Administrative procedures, particularly related to permitting and procurement, can be slow and burdensome, creating delays in project implementation.

#### Opportunities

- There is a significant opportunity to improve energy security by reducing reliance on fossil fuels through increased use of local renewable energy sources and waste heat.

#### Threats

- External threats include volatility in global energy markets and rising capital costs, which may impact the financial viability of RES projects;
- Incumbent fossil-fuel-based operators may resist change, potentially slowing down the transition process.
